

SPD Control Systems Corporation

Company Overview

SPD Control Systems Corporation specializes in **SPD Window Electronic Controller and Energy Management Building Control Systems**. The *TintMaker automotive controller* is available now and we are developing our residential / commercial *SPD Window Building Energy Building Control System* under a contract from NYSERDA.

SPD

SPD (Suspended Particle Device) Smart Glass changes tint from clear to dark and all shades in-between in 1 to 2 seconds using our controllers. **Advantages:** Energy Conservation (green buildings), Daylighting, Glare Control / Occupant Comfort, Aesthetics, Security and Privacy. SPD eliminates the need for window treatments and provides for active control of solar energy.

Markets

Worldwide anywhere glass (or polycarbonate) windows are used: architectural, automotive, marine, aerospace, etc. Glass manufacturers produce 47 billion sq. ft of glass per year and SPD is positioned to capture a growing percentage of that market each year. SPD glass requires an electronic controller to change tint.

Customers

Licensees of Smart Glass technology are our customers, including Hitachi, Pilkington, PGW/PPG, Nippon Sheet Glass, Asahi, Isoclima, and AGP Group. These companies account for over 50% of the world's glass production. We have established working relationships with these key SPD licensees. We are also working closely with major automotive companies, auto after-market distributors, and architecture firms.

Position

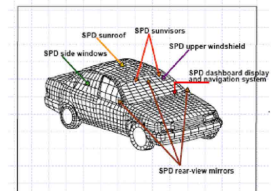

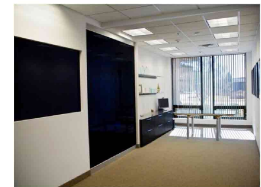

SCSC is the only Smart Glass licensee for electronics. We have a comprehensive international patent pending for intelligent Smart Glass controllers for the automotive, aerospace, marine, and architectural markets.

Team

SCSC has assembled an outstanding team of very experienced successful serial entrepreneurs with marketing and systems expertise.
